Unit pricing & Cut-off Timings

Value of Units: The unit price of each Fund will be the unit value calculated on a daily basis.

Total Market Value of assets plus/less expenses incurred in the purchase/sale of assets plus Current Assets plus any accrued income net of fund management charges less Current Liabilities less Provision

Unit Value = _____
Total Number of units on issue (before any new units are allocated/ redeemed)

Cut-off Timings

a) **Uniform cut-off timings for applicability of Net Asset Value:**

The allotment of units to the policyholder should be done only after the receipt of premium proceeds as stated below:

b) **Allocations (premium allocations, switch in)**

In case of new business, units shall be allocated on the day proposal is completed and results into a policy by adjustment of application money towards premium.

In the case of renewal premiums, the premium will be adjusted on the due date, whether or not it has been received in advance. (This assumes that the full stipulated premium is received on the due date.)

Renewal premiums received in advance will be kept in the suspense account and will not earn any returns until the renewal premium due date on which the same will be applied to the unit fund.

- i) In respect of renewal premiums received up to 3.00 p.m. by the insurer along with a local cheque or a demand draft payable at par at the place where the premium is received, the closing NAV of the day on which premium is received shall be applicable.
- ii) In respect of renewal premiums received after 3.00 p.m. by the insurer along with a local cheque or a demand draft payable at par at the place where the premium is received, the closing NAV of the next business day shall be applicable.
- iii) In respect of renewal premiums received with outstation cheques/demand drafts at the place where the premium is received, the closing NAV of the day on which cheques/demand draft is realized shall be applicable.

- ii) In respect of valid applications received (e.g. surrender, maturity claim, switch out etc) after 3.00 p.m. by the insurer, the closing NAV of the next business day shall be applicable.

Fund Valuation:

The value of the fund will be equal to the no of units multiplied by the Net Asset Value (NAV) of each unit in the fund.

The computation of NAV will be based on whether the Company is purchasing (appropriation price) or selling (expropriation price) the assets in order to meet the day to day transactions of unit allocations and unit redemptions i.e. the Company shall be required to sell/purchase the assets if unit redemptions/allocations exceed unit allocations/redemptions at the valuation date.

The Appropriation price shall apply in a situation when the company is required to purchase the assets to allocate the units at the valuation date. This shall be the amount of money that the company should put into the fund in respect of each unit it allocates in order to preserve the interests of the existing policyholders.

The Expropriation price shall apply in a situation when the company is required to sell assets to redeem the units at the valuation date. This shall be the amount of money that the company should take out of the fund in respect of each unit it cancels in order to preserve the interests of the continuing policyholders.

Computation of Net Asset Value (NAV)

When Appropriation price is applied: The NAV for a particular fund shall be computed as: Market value of investment held by the fund plus the expenses incurred in the purchase of the assets plus the value of any current assets plus any accrued income net of fund management charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any new units are allocated), gives the unit price of the fund under consideration.

When Expropriation price is applied: The NAV for a particular fund shall be computed as: Market Value of investment held by the fund less the expenses incurred in the sale of the assets plus the value of any current assets plus any accrued income net of fund management

charges less the value of any current liabilities less provisions, if any. This gives the net asset value of the fund. Dividing by the number of units existing at the valuation date (before any units are redeemed), gives the unit price of the fund under consideration.

In case the valuation day falls on a holiday, then the exercise will be done the following working day.

We reserve the right to value less frequently than daily in extreme circumstances, where the value of the assets may be too uncertain. In such circumstances we may defer valuation of assets until normality returns. Examples of such circumstances are:

- a) When one or more stocks exchanges which provide a basis for valuation for a substantial portion of the assets of the fund are closed otherwise than for ordinary holidays
- b) When, as a result of political, economic, monetary or any circumstances out of our control, the disposal of the assets of the unit fund are not reasonable or would not reasonably be practicable without being detrimental to the interests of the remaining unit holders.
- c) During periods of extreme volatility of markets during which surrenders and switches would, in our opinion, be detrimental to the interests of the existing unit holders of the fund.
- d) In the case of natural calamities, strikes, war, civil unrest, riots and bandhs.
- e) In the event of any force majeure or disaster that affects our normal functioning.
- f) If so directed by the IRDA.
